

NETAPP UNIVERSITY

Configuring and Monitoring NetApp E-Series and EF-Series Storage Systems

Abstract

In this course, you learn how to deploy, configure, and monitor NetApp E-Series or EF-Series storage systems. In the deployment phase, you use both the NetApp SANtricity® Storage Management and System Management software to create the configuration, perform administrative tasks, and employ data protection features. You also learn how to configure attached servers for I/O operations. During post-deployment, you use SANtricity Unified Manager and System Management software and to collect storage system information for trend analysis, troubleshooting, performance monitoring, and tuning.

Objectives

In this course, you learn how to configure and monitor E-Series and EF-Series storage systems, including:

- Installing the SANtricity Storage Management software
- Installing SANtricity Unified Manager
- Accessing System Manager features
- Configuring attached servers for I/O operations
- Administering your storage using the E-Series storage management features
- Monitoring E-Series storage system performance
- Troubleshooting common hardware and performance issues with the E-Series and EF-Series product lines

Prerequisites

- Basic Windows administrative experience
- E-Series Fundamentals

Delivery Type

Instructor-led training (ILT) and Virtual instructor-led training (VILT)

Duration

Four Days (32 hours)

Audience

Professional services workers who are NetApp customers, employees, or partners

Training Units

48

Language

English
