Advanced Troubleshooting

COURSE DETAILS

Course Name: Advanced Troubleshooting, REV 16.41
Course Code: AR- ATS
Delivery Type: Instructor-Led
Duration: 4 Days

COURSE CONTENT

This advanced instructor-led course teaches you how to quickly identify and remedy symptoms that may occur in Aruba based networks. The course provides an overview of methodologies and tools for troubleshooting Aruba based networks in an AOS 6.X environment. Course labs are designed to inject problems into the learner's networks in a controlled fashion to demonstrate how various symptoms appear. Therefore, when problems are seen in a production environment, they will be more quickly identified and remedied.

This course is not a hardware troubleshooting oriented class. Rather it focuses on the commands and screens necessary to diagnose network and wireless related issues.

COURSE OBJECTIVES

After you successfully complete this course, expect to be able to:

- Diagnose issues with Aruba mobile first networks
- Issue the appropriate troubleshooting commands and actions to investigate the issues
- Resolve the issues by taking the appropriate remediation action

COURSE OUTLINE

- IAP Introduction
- WLAN
- Captive Portal
- Firewall
- User Troubleshooting
- ARM
- Mesh and Wired Access
- Roaming
- Instant AP VPN
- Instant AP VPN DHCP
- Instant AP IPS/IDS

WHO SHOULD ATTEND

Ideal candidates are experienced network professionals who are responsible for the provisioning and configuration maintenance of an Aruba based network.
